

Listing of Claims:

1. (Previously Presented) An image reproduction apparatus which is connectable to a memory configured to record photographed image data and photographing information of the photographed image data in association with each other, the image reproduction apparatus comprising:

a display;

a first display control unit configured to set a given number of display areas on the display, the display areas each being assignable to one of a plurality of different image groups;

a display area selection unit configured to select from among the display areas, based on the photographing information recorded in the memory, a display area to which an image group including the photographed image data recorded in the memory is assigned;

a second display control unit configured to limit a number of the photographed image data, from among all of the photographed image data of the image group assigned to the selected display area, to be simultaneously displayed in the selected display area to a predetermined number; and

a third display control unit configured to display other photographed image data that is from among the all of the photographed image data of the image group assigned to the selected display area and that is not included within the

predetermined number, by changing the predetermined number of
25 photographed image data simultaneously displayed in the selected
display area, while maintaining display control of the first and
second display control units, thereby continuously displaying, in
the selected display area selected by the display area selection
unit from among the given number of display areas on the display,
30 the other photographed image data of the image group assigned to
the selected display area.

2. (Previously Presented) The apparatus according to
claim 1, wherein the photographing information comprises
information representing a photographing time of the photographed
image data.

3. (Withdrawn) The apparatus according to claim 1, wherein
the photographing information comprises information representing
a photographing position of the photographed image data.

4. (Withdrawn) The apparatus according to claim 1, wherein
the photographing information comprises information representing
a type of the photographed image data.

5. (Previously Presented) The apparatus according to
claim 1, wherein the second display control unit includes an

image selection unit configured to select the predetermined number of photographed image data having earliest photographing times, and a selected image display control unit configured to simultaneously display, in the selected display area, the predetermined number of photographed image data selected by the image selection unit.

6. (Withdrawn) The apparatus according to claim 1, wherein the second display control unit includes an image selection unit configured to select arbitrary photographed image data up to the predetermined number, and a selected image display control unit configured to simultaneously display, in the selected display area, the predetermined number of photographed image data selected by the image selection unit.

7. (Previously Presented) The apparatus according to claim 1, wherein the second display control unit limits the predetermined number of photographed image data to be simultaneously displayed in the selected display area to one.

Claims 8-10 (Canceled).

11. (Previously Presented) The apparatus according to claim 1, further comprising a display area designation unit

configured to designate an arbitrary display area of the given number of display areas, and an image processing unit configured to execute predetermined image processing at once for a plurality of photographed image data to be displayed in the arbitrary display area designated by the display area designation unit.

12. (Withdrawn) The apparatus according to claim 11, wherein the display area designation unit designates a plurality of arbitrary display areas of the given number of display areas, and the image processing unit executes the predetermined image processing at once for a plurality of photographed image data to be displayed in each of the plurality of display areas designated by the display area designation unit.

13. (Previously Presented) The apparatus according to claim 11, further comprising an image processing designation unit configured to designate a type of image processing, and wherein the image processing unit executes image processing of the type designated by the image processing designation unit at once for the plurality of photographed image data.

14. (Withdrawn) The apparatus according to claim 1, wherein the second display control unit also limits a type of photographed image data to be displayed in the selected display area.

15. (Withdrawn) The apparatus according to claim 14,
further comprising an image type designation unit configured to
designate the type of photographed image data, and wherein the
second display control unit limits the type of photographed image
5 data to be displayed in the selected display area based on the
type of photographed image data designated by the image type
designation unit.

16. (Withdrawn) The apparatus according to claim 1, wherein:
the first display control unit includes a setting unit
configured to set a number of storage areas on a display memory,
the display area selection unit includes a selection unit
5 configured to select from among the storage areas on the display
memory, based on the photographing information recorded in the
memory, a storage area in which the photographed image data and
associated photographing information recorded in the memory is
storable,

10 the second display control unit includes a limiting unit
configured to limit the number of photographed image data to be
simultaneously stored in the storage area, and

the apparatus further comprises an image file generation
unit configured to generate image file data using the
15 photographed image data stored on the display memory by the first
and second display control units and the display area selection
unit.

17. (Withdrawn) The apparatus according to claim 16,
wherein:

the display displays the photographed image data stored on
the display memory by the first and second display control units
5 and the display area selection unit,

the apparatus further comprises a generation instruction
unit which instructs generation of the image file data by the
image file generation unit, and when instruction by the
generation instruction unit is issued in a state wherein the
10 photographed image data is displayed on the display, the image
file generation unit generates the image file data.

18. (Withdrawn) The apparatus according to claim 16,
wherein the memory records the image file data generated by the
image file generation unit.

19. (Withdrawn) The apparatus according to claim 16,
further comprising a transmission unit which transmits the image
file data generated by the image file generation unit to an
external device.

20. (Previously Presented) The apparatus according to
claim 1, further comprising:

a display area designation unit configured to designate an
arbitrary display area of the given number of display areas; and

5 a fourth display control unit configured to simultaneously
display, on the display, a plurality of photographed image data
including photographed image data which are limitable by the
second display control unit and are not displayed, in the
arbitrary display area designated by the display area designation
10 unit.

21. (Previously Presented) The apparatus according to
claim 20, further comprising:

an image selection unit configured to select an arbitrary
photographed image data from the plurality of photographed image
5 data simultaneously displayed on the display by the fourth
display control unit, and

a fifth display control unit configured to display, on the
display, an enlarged image of the arbitrary photographed image
data selected by the image selection unit.

22. (Previously Presented) The apparatus according to
claim 1, further comprising an image sensor configured to sense
an object image and output photographed image data, and wherein
the memory records the photographed image data output from the
5 image sensor.

Claims 23-31 (Canceled).

32. (Previously Presented) An image reproduction method comprising:

a first display control step of setting a given number of display areas on a display, the display areas each being
5 assignable to one of a plurality of different image groups;

a display area selection step of selecting from among the display areas, based on photographing information recorded in a memory, a display area to which an image group including
10 photographed image data recorded in the memory in association with the photographing information is assigned;

a second display control step of limiting a number of the photographed image data, from among all of the photographed image data of the image group assigned to the selected display area, to
15 be simultaneously displayed in the selected display area to a predetermined number; and

a third display control step of displaying other photographed image data that is from among the all of the photographed image data of the image group assigned to the selected display area and that is not included within the
20 predetermined number, by changing the predetermined number of photographed image data simultaneously displayed in the selected display area, while maintaining the display control of the first and second display control steps, thereby continuously displaying, in the selected display area selected by the display

25 area selection step from among the given number of display areas
on the display, the other photographed image data of the image
group assigned to the selected display area.

33. (Previously Presented) A computer readable medium
having recorded thereon a computer readable program for
controlling an image reproduction apparatus to execute:

5 a first display control step of setting a given number of
display areas on a display, the display areas each being
assignable to one of a plurality of different image groups;

10 a display area selection step of selecting from among the
display areas, based on photographing information recorded in a
memory, a display area to which an image group including
photographed image data recorded in the memory in association
with the photographing information is assigned;

15 a second display control step of limiting a number of the
photographed image data, from among all of the photographed image
data of the image group assigned to the selected display area, to
be simultaneously displayed in the selected display area to a
predetermined number; and

20 a third display control step of displaying other
photographed image data that is from among the all of the
photographed image data of the image group assigned to the
selected display area and that is not included within the

predetermined number, by changing the predetermined number of
photographed image data simultaneously displayed in the selected
display area, while maintaining the display control of the first
and second display control steps, thereby continuously
25 displaying, in the selected display area selected by the display
area selection step from among the given number of display areas
on the display, the other photographed image data of the image
group assigned to the selected display area.
